

Daffodil International University

Department of Electrical and Electronic Engineering Faculty of Engineering

Final Examination, Fall - 2024

Course Code: 0541-123

Section: A,B,C Full Marks: 40

Course Title: Ordinary & Partial Differential Equations

Level-Term: L1-T2 Teacher's Initial: TRS

Exam Date: December 28, 2024 Time: 2 Hours

[Notes: Answer all the following questions

CO's represent one of the learning outcomes of the course.

Figures on the right hand side indicate marks allocated for the questions.]

Marks

Q1. (a) Discuss the standard form of the linear & Bernoulli's differential equation. Also **CO-1** [6] identify the following differential equations whether they are linear or Bernoulli

after transforming the

corresponding standard form

i)
$$\frac{dy}{dx} + \frac{y}{x} = x^3$$
. ii) $\frac{dy}{dx} + \frac{xy}{1-x^2} = xy^{\frac{1}{2}}$. **(b) Evaluate** the differential equation $\frac{dy}{dx} + \frac{2}{x}y = e^x$.

CO-2 (C4)

[4] [10]

Q2. Solve the following differential equations using the appropriate method:

CO-2

i)
$$\frac{dy}{dx} + ysecx = sinx$$
ii) $\frac{dy}{dx} + 2sax = xxx^2$

(C4)

$$ii)\frac{dy}{dx} + 2xy = xy^2$$

Q3. (a) Solve the following differential equations

CO-2 [15]

i)
$$\frac{d^2y}{dx^2} - 2\frac{dy}{dx} + 3y = x^2$$

(C4)

ii)
$$x^2 \frac{d^2y}{dx^2} - 3x \frac{dy}{dx} + 4y = 2x^2$$

iii)
$$(y^2 + z^2)p - xyq + xz = 0$$

Q4. Compute the general solutions of the differential equation from the following Initial **CO-3** [5] Value Problem: (C3)

 $(D^2 + 2D + 2)y = 0$, y(0) = 0, y'(0) = 1
