

Daffodil International University

Department of Computer Science and Engineering

Faculty of Science & Information Technology

Final Examination, Spring-2022

Course Code: CSE134 (Day), Course Title: Data Structure

Sections, Teachers: All

Time: 2:00 Hrs.

Marks: 40

Answer ALL Questions:

1.	a)	For the following binary tree, answer the following questions:		CO3																																																																																	
		<pre> graph TD 24 --> 12 24 --> 21 12 --> 10 12 --> 13 21 --> 20 21 --> 40 20 --> 18 20 --> 50 </pre> Now, for the above tree, write the order of nodes visited: (i) In-order Traversal, (ii) Pre-order Traversal and (iii) Post-order Traversal.	3																																																																																		
	b)	Construct a Max Heap from the Tree shown and insert nodes 14, and 19.	2.5																																																																																		
	c)	Construct a Min Heap from the Tree shown and delete nodes 40, and 10.	2.5																																																																																		
	d)	Write the differences between Max Heap and Min Heap	2																																																																																		
2.	a)	Construct a Binary Search Tree (BST) and write properties of it.	3	CO3																																																																																	
	b)	Show the BST after adding new nodes with the data value 16, 26.	2.5																																																																																		
	c)	Show the BST after deleting the nodes having the data value 21, 24.	2.5																																																																																		
	d)	Write, why all the binary trees are not BST.	2																																																																																		
3.	a)	Consider the following graph and answer the following questions:		CO4																																																																																	
		<pre> graph LR A((A)) --> B((B)) B --> C((C)) B --> D((D)) C --> E((E)) D --> E D --> F((F)) G((G)) --> D </pre> Now, Determine the sorted sequence of the nodes for the above graph.	3																																																																																		
	b)	Determine the strongly connected components of the above Graph.	4																																																																																		
	c)	Conclude the differences between directed graph and undirected graph.	3																																																																																		
4.	a)	For the Graph processing, answer the following questions:		CO1																																																																																	
		<table border="1"> <thead> <tr> <th></th> <th>A</th> <th>B</th> <th>C</th> <th>K</th> <th>E</th> <th>P</th> <th>G</th> <th>Z</th> </tr> </thead> <tbody> <tr> <td>A</td> <td>0</td> <td>1</td> <td>0</td> <td>1</td> <td>0</td> <td>0</td> <td>0</td> <td>0</td> </tr> <tr> <td>B</td> <td>1</td> <td>0</td> <td>1</td> <td>0</td> <td>0</td> <td>0</td> <td>1</td> <td>0</td> </tr> <tr> <td>C</td> <td>0</td> <td>1</td> <td>1</td> <td>1</td> <td>0</td> <td>0</td> <td>0</td> <td>0</td> </tr> <tr> <td>K</td> <td>0</td> <td>1</td> <td>1</td> <td>0</td> <td>0</td> <td>1</td> <td>0</td> <td>0</td> </tr> <tr> <td>E</td> <td>0</td> <td>0</td> <td>0</td> <td>0</td> <td>0</td> <td>1</td> <td>1</td> <td>0</td> </tr> <tr> <td>P</td> <td>0</td> <td>1</td> <td>1</td> <td>0</td> <td>0</td> <td>0</td> <td>1</td> <td>0</td> </tr> <tr> <td>G</td> <td>1</td> <td>0</td> <td>1</td> <td>0</td> <td>0</td> <td>0</td> <td>0</td> <td>1</td> </tr> <tr> <td>Z</td> <td>0</td> <td>1</td> <td>1</td> <td>1</td> <td>0</td> <td>0</td> <td>0</td> <td>0</td> </tr> </tbody> </table> Use the above adjacency matrix and draw the graph.		A	B	C	K	E	P	G	Z	A	0	1	0	1	0	0	0	0	B	1	0	1	0	0	0	1	0	C	0	1	1	1	0	0	0	0	K	0	1	1	0	0	1	0	0	E	0	0	0	0	0	1	1	0	P	0	1	1	0	0	0	1	0	G	1	0	1	0	0	0	0	1	Z	0	1	1	1	0	0	0	0	2	
	A	B	C	K	E	P	G	Z																																																																													
A	0	1	0	1	0	0	0	0																																																																													
B	1	0	1	0	0	0	1	0																																																																													
C	0	1	1	1	0	0	0	0																																																																													
K	0	1	1	0	0	1	0	0																																																																													
E	0	0	0	0	0	1	1	0																																																																													
P	0	1	1	0	0	0	1	0																																																																													
G	1	0	1	0	0	0	0	1																																																																													
Z	0	1	1	1	0	0	0	0																																																																													
	b)	Apply BES to find the path from A to Z.	5																																																																																		
	c)	Illustrate your idea about DAG.	3
