

Daffodil International University
Faculty of Science & Information Technology
Final Examination, Spring 2023
Course Code: CSE233
Course Title: Object Oriented Programming II
Level: L2 Term: T1,T2 Batch: 59 & 60

Time: 2:00 Hrs

Marks: 40

Answer ALL Questions

[The figures in the right margin indicate the full marks and corresponding course outcomes. All portions of each question must be answered sequentially.]

1.	a)	Define Object Oriented Programming and the main features of OOP in python with proper examples.	[5]	CO3
	b)	Create built-in and user-defined polymorphism with Python programming language.	[5]	
2.	Student Manaeement + name: String +id: Int + email: String + get Student info (): void + Course Information (): void + result (): void Administrator -Accounts: Int + get Student info (): void + exam info (): void + Accounts Ledger (): void Exam Controller #CGPA: Int -duration: real -result (): void - Exam details(): void Student Information + Others information: String +get others information: String + get Student info (): Void + Course taken (): void +Enrolment record (): void Develop the functionalities given below: - Identify all the attributes and methods. Now you have to build base class and subclass from the UML with those attributes and methods. - Develop an appropriate OOP method where authority decides to waive 20% of the tuition fee if the student's CGPA is over 3.5 and 25% of tuition fee if the student's CGPA is over 3.75. Display their tuition fee after waiver using your method. - Illustrate which methods have overloading and overriding relations into different entities.		[15]	CO3
3.	Analyze the pseudo code given below. If there is any error, rephrase it so that the compiler runs. You can't change arithmetic operations or any argument. <pre style="margin-left: 40px;"> number = 22 divider = 0 result = number/divider print (result) </pre>		[5]	CO2

4.	Construct a 2D array using a 4X3 matrix where, first and third row will be 1 to 30 containing the same distance. Identify the following questions. i. Identify the shape of diagonal, above and below diagonal values. ii. Construct a 3X4 matrix from the previous one and identify mean, max, variance values of 2nd to 4th column. iii. Describe the difference between a numpy array can access previous memory or can not access.	[10]	CO1
