

Daffodil International University
Department of Electrical and Electronic Engineering
Faculty of Engineering

Final Examination, Spring - 2026

Course Code: 0541-121

Course Title: Linear Algebra and Complex Variable

Section: A, B, C, D, E, F, G

Level-Term: L1-T2

Teacher's Initial: HRP, SS

Full Marks: 40

Date: April 27, 2026

Time: 2 Hours

[Answer all the following questions]

[The second right-most column indicates the COs with the respective Bloom's level]
[The right-most column indicates the assigned marks]

- Q1.** Explain the following with example
(i) Cayley-Hamilton Theorem (ii) Analytic Function
CO-1 [2]
(C2)
- Q2.** $A = \begin{pmatrix} 6 & -2 & 2 \\ -2 & 3 & -1 \\ 2 & -1 & 3 \end{pmatrix}$ is a matrix
CO-1 [8]
(C2)
- a) Identify the eigenvalues of A^T, A^2, A^{-1}, A^{-2}
b) Identify the eigenvectors of the matrix A.
- Q3.** a) Calculate whether or not the following vectors are linearly dependent
 $t^2 + t + 2, 2t^2 + t, 3t^2 + 2t + 2$ in $\mathbb{R}^3$. CO-2 [5]
(C3)
b) Identify the following mapping is linear or not and discover T^{-1} if it exists, CO-2 [5]
(C3)
where $T: \mathbb{R}^3 \rightarrow \mathbb{R}^3$ is given by
 $T(x, y, z) = (3x + y, -2x - 4y + 3z, 5x + 4y - 2z)$
c) Interpret whether or not the vector $(12, 5, 11, 8)$ as a linear combination of CO-2 [5]
(C3)
the vectors $(2, 1, 0, 1), (1, 0, 1, 1), (1, 1, 1, 0)$ and $(3, -1, 1, 2)$ in $\mathbb{R}^4$.
- Q4.** a) In Electrical and Electronic Engineering, complex analysis plays a crucial role in CO-3 [5]
analyzing signals and systems, especially in frequency-domain techniques. One (C4)
important result is the Cauchy's Integral Formula. Analyze the following
integrals by identifying the singularities inside the given contours and determine
their values.
i. $\oint \frac{9z^2 - iz + 4}{z(z^2 + 1)} dz$, Where the circle is $|z| = 2$
ii. $\oint \frac{z-3}{z^2 + 2z + 5} dz$, Where the circle is $|z + 1 - i| = 2$
CO-3 [7]
(C4)
b) List out all the possible roots of
i) $z^5 + 32 = 0$ ii) $z^4 + 8 - 8\sqrt{3}i = 0$
c) Consider the complex expression $\left(\frac{1-i}{1+i}\right)^{100}$. First, evaluate the expression and CO-3 [3]
(C4)
represent your answer in the form $P+iQ$, where P and Q are real numbers. Then,
classify the resulting complex number based on its position on the complex plane
by identifying the quadrant or axis it lies on.
