

Daffodil International University

Faculty of Science & Information Technology

Department of Computer Science & Engineering

Final Semester Examination, Fall 2024

Course Code: CSE212, Course Title: Discrete Mathematics

Level: 2 Term: 1 Batch: 65

Time: 2:00 Hrs

Marks: 40

Answer ALL Questions

[The figures in the right margin indicate the full marks and corresponding course outcomes. All portions of each question must be answered sequentially.]

1.	a) Determine whether the given relation is reflexive, symmetric, transitive, or none of these. Justify your answers. i. C is the circle relation on the set of real numbers: For every $x, y \in \mathbb{R}$, $x C y \Leftrightarrow x^2 + y^2 = 1$. ii. D is the "divides" relation on $\mathbb{Z}^+$: For all positive integers m and n, $m D n \Leftrightarrow m n$	[4]	[CO2]
	b) Use mathematical induction to prove that for all non-negative integers n. $1 + \frac{1}{2} + \frac{1}{2^2} + \frac{1}{2^3} + \dots + \frac{1}{2^n} = 2 - \frac{1}{2^n}$	[6]	
2.	a) Prove whether the following graphs G and G' are isomorphic or not?	[4]	[CO3]
	b) Apply the concept of Dijkstra's algorithm to find the shortest path from a to z.	[6]	
3.	a) Justify whether the following graphs are bipartite or not.	[7]	[CO3]

	b) Draw these Graphs- i. C_5 ii. $K_{4,3}$ iii. W_7	[3]	
4.	a) Apply Prim's algorithm on the following graph starting at node a to construct a minimum spanning tree indicating the order in which edges are added to form each tree. and find the weight of the tree. 	[7]	[CO3]
	b) Draw a graph from the following adjacency matrix. $\begin{bmatrix} 0 & 0 & 0 & 1 & 2 \\ 0 & 0 & 0 & 1 & 1 \\ 0 & 0 & 0 & 2 & 1 \\ 1 & 1 & 2 & 0 & 0 \\ 2 & 1 & 1 & 0 & 0 \end{bmatrix}$	[3]
